The folded state costs energy and the ring occupies it anyway — it is made by the drive

energy computed from the engine's own potentials (agrees with its forces to 3e-09) · passive control: 70 runs × 300 s, 20647 s total, 0 folding events, closest approach Rg 2.24 vs threshold 1.89 · active: Results_N17_bistable_long
